# Master algorithm – obstetric general anaesthesia and failed tracheal intubation

## Algorithm 1 Safe obstetric general anaesthesia

**Pre-induction planning and preparation**  
Team discussion

**Rapid sequence induction**  
Consider facemask ventilation ( $P_{\max} 20 \text{ cmH}_2\text{O}$ )

**Laryngoscopy**  
(maximum 2 intubation attempts; 3<sup>rd</sup> intubation attempt only by experienced colleague)

Success

Verify **successful** tracheal intubation and proceed  
Plan extubation

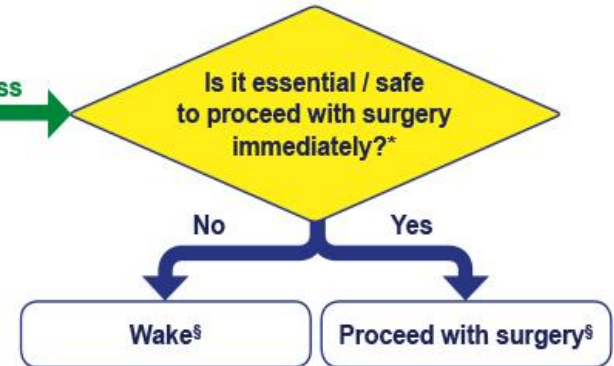

Fail

## Algorithm 2 Obstetric failed tracheal intubation

**Declare failed intubation**  
**Call for help**  
**Maintain oxygenation**  
**Supraglottic airway device** (maximum 2 attempts) or facemask

Fail

Success

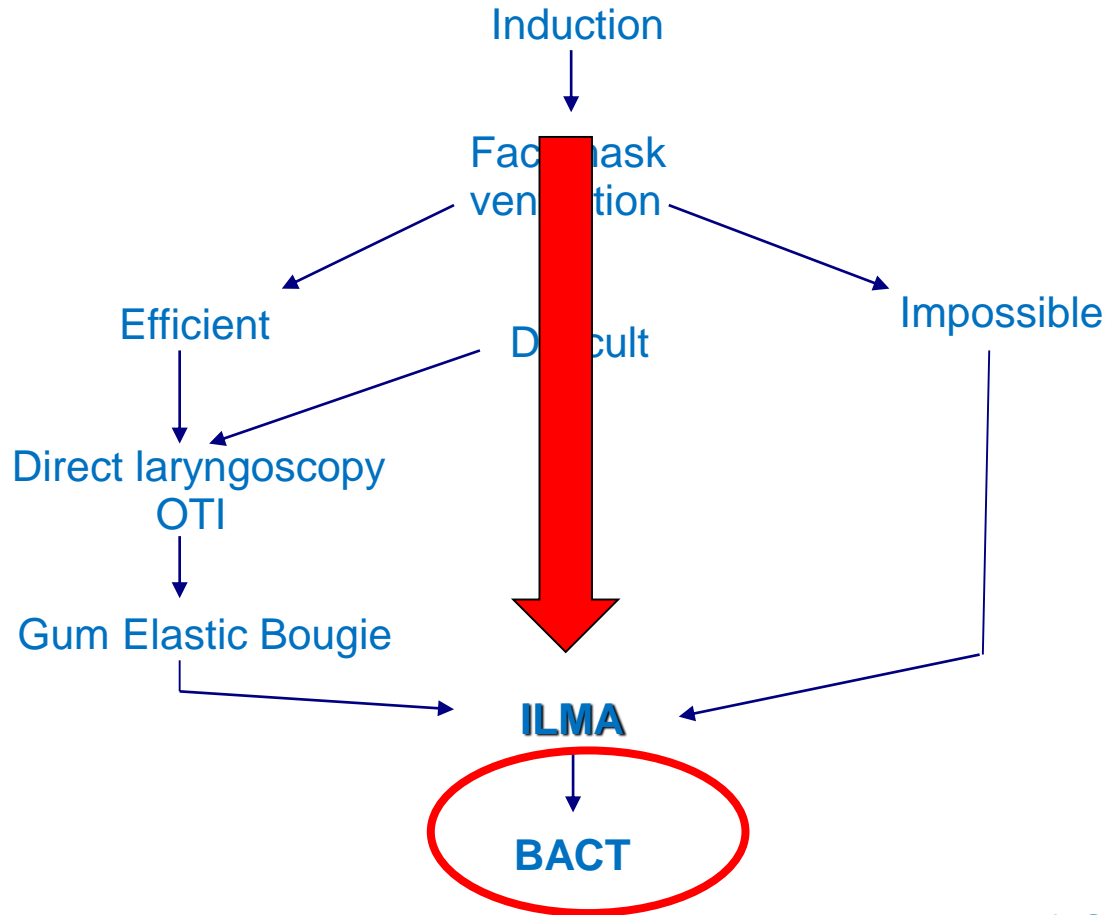

## Algorithm 3 Can't intubate, can't oxygenate

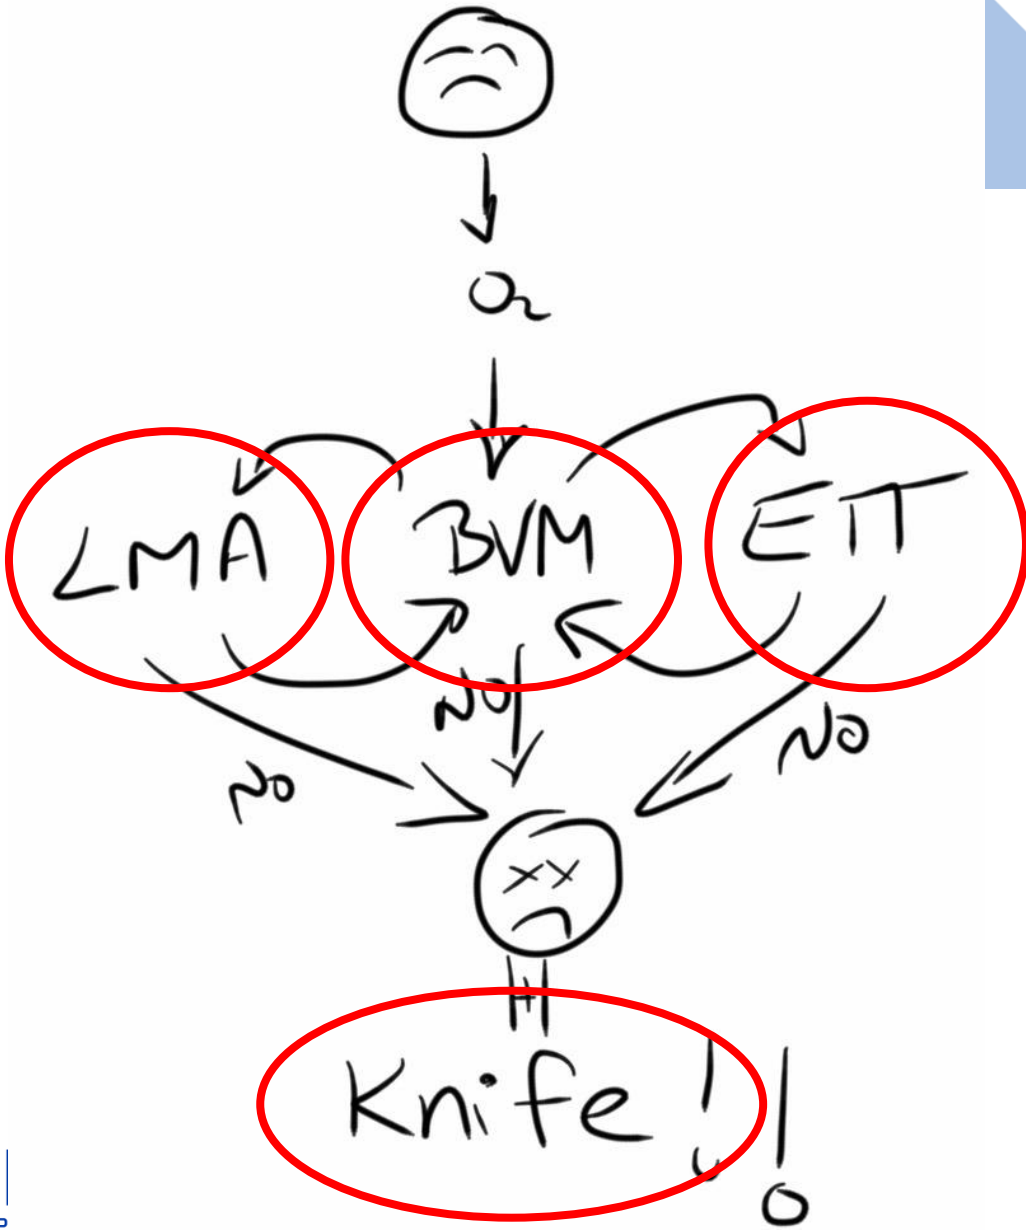

**Declare CICO**  
**Give 100% oxygen**  
**Exclude laryngospasm – ensure neuromuscular blockade**  
**Front-of-neck access**
